### DETAILS OF STANDARD MIXALL CONSTRUCTION

- End plates are reinforced to provide stiffness and support. Blind-end plate is bolted to the tank and the drive end is welded - both at a 90 degree angle - no radius.
- Uniquely designed double ribbon type agitator assembly features ribbons welded to cross-arms. Paddle agitators feature paddles that can be either welded or bolted to cross arms.
- A solid steel shaft with flange type bearings may be used when the torque of the cylinder is under 24,000 inch-pounds. A tubular shaft is used on applications between 24,000 and 560,000 inch-pounds of torque.
- Drive-end bearings and journals will withstand high starting torque at maximum recommended horsepower. Bearings are 2 1/2 times the calculated radial load. High quality, self-aligning type bearings are furnished on all Mixalls.
- Bearings are mounted to allow for alignment of cylinder and have lock screws to secure the bearing locations.
- Support cradles under the tank are available to provide improved distribution of heavier loads.

Double Ribbon Agitator

Paddle Agitator

Mixers have been designed and built up to 1,500 cubic foot capacities

Custom designs are job-engineered to meet your specific applications

See "Mixer Accessories & Options" brochure for further details
